

# Year 3-4 week ending 17.3.23

English: We have completed our instructions for drawing a character. Describing where to draw lines, the direction and shape of the lines not to mention the size have all tested our use of prepositions this week.

Spelling, reading and times table books have been used well this week. Well done to everyone who has remembered to bring them each day – please continue to support your child to remember these books.

We made pan pipes in science this week to help our investigation of pitch. We have researched why the pitch of sound varies and we have listened to different instruments listening for changes in pitch.

Capacity has been our focus this week – litres, millilitres and centilitres. We have measured, compared and converted volumes this week.

Problem solving has also been tricky but we have all risen to the challenge and made progress.

Lots of pictures and sounds this week as we have looked at different types of volcanoes and the different effect that they have. We have examined the different characteristics of volcanoes.

Who knew that 10,000 years was such an important measure?

Please continue to practice times tables, through rock stars, super movers or your games – it's so important and makes a huge difference to our learning in maths.
