

Year 5/6 Week ending: 4/11/22

Year 5/6 have revised our maths topics for Autumn 1. We have applied our knowledge in context - looking at a range of problem solving and reasoning questions.

We have moved onto our new topics:

Trade Past and Present

Animals Including Humans

Science was very active this week. We needed help to remember the main functions of the circulatory system. What better way than to act it out?

Trade past and present.

Year 5/6 explored different food packages to find out where they had been made.

They calculated how many miles they had travelled to get us in the UK then showed these trade links on a world map.

We were excited for our trip to the Eagles Basketball Centre: it was a great first day back. We were taught some great facts and techniques from some of the girls from the first team!

We found out about careers that we hadn't even heard of.

Did you know a data analyst is paid to collect a range of data in the matches? They analyse and collate the data to help improve performances.
